ELF C/D guidance study · 64 SDE steps · gamma 1.0

Arm C

Published A (24.08, 5.15) uses 32 steps; no external 64-step point is available.

GenPPL (lower is better)

Repeated 4-gram fraction

Mean sample unigram entropy (post-cap GPT-2 tokens)

Screening, seed 10 / n=250
Confirmation mean ± sample SD (3 seeds)
Outside trained SC range [.5, 5]
Local A anchor, SC=3

Labels are SC-CFG scales. All measured points retained. Frontier segments are visual summaries; interpolation was not sampled.
Shading: predefined entropy neighborhood [5.10, 5.20]. Error bars reflect inference variation only; one training seed per model.
